What do you understand about the work and finish line?

My goal is to create a very simple 3D game in Unity where the player controls a ball and moves it around a platform. I want to keep the game basic so I can finish it quickly. I will create a platform, add a ball, and write a simple script to control its movement. The project will be finished when the ball moves using the keyboard and the game runs without errors.

What will you contribute? Name a task or useful capability.

I can contribute by creating the basic game environment in Unity, adding the ball and platform, and working on the movement controls. I m still learning how to code, but I can follow tutorials, test the game, and fix problems as I go. I will also help keep the project organized and save my progress on GitHub.

What needs research, support or practice?

I still need to learn how to use Unity better, especially how to create objects and make them move. I also need more practice with C# so I can write a simple script to control the ball using the keyboard. I may need help fixing errors and testing the game to make sure everything works correctly.

Your available work times and preferred contact method: Discord, email, text, classroom or other. Keep private addresses/numbers outside public exports.

Preferred contact: Classroom

I will be working independently on my Unity game project. My goal is to finish a simple 3D Roll-a-Ball game as soon as possible. I can communicate through the classroom if I need help.

List your project tools and why you need them.

I will use Unity to create my 3D game and add the ball and platform. I will use Visual Studio Code to write a simple C# script that lets the player move the ball with the keyboard. I will also use GitHub to save my project and keep track of my progress. These tools will help me create, test, and organize my game.

Required: name the AI you will use, its project task and how you will verify its output. Use course-provided/shared or approved local access if needed; no personal or paid AI account is required.

AI: ChatGPT

Task: I will use ChatGPT to help me create a simple 3D game in Unity, write basic C# scripts, and fix errors when I get stuck.

Verification: I will test the code in Unity, check for errors, and make sure the ball moves correctly when I play the game.
